

# Jatesh Joshi

Software Engineer | Backend Systems | Python | APIs  
**City:** San Jose, California  
**Email address:** jateshjoshi02@gmail.com  
**LinkedIn:** <https://www.linkedin.com/in/jatesh-joshi-software-engineer>  
**GitHub:** <https://github.com/Coder-tech24>

## 🔧 Technical Skills

- **LANGUAGES:** PYTHON, JAVA, SQL, R
- **TECHNOLOGIES:** FLASK, REACT, REST APIS, DOCKER, GIT, LINUX
- **CONCEPTS:** API DESIGN, DATA MODELING, SERVICE ARCHITECTURE, DIJKSTRA, A\*, TIME & SPACE COMPLEXITY

## 📁 Projects

Python, FastAPI, React, REST APIs, SQL, Docker, Service Layer Architecture

### OpsFlow Ticketing System (In Progress)

- Designing and building a backend system to manage tickets, users, and workflows using Python and REST APIs
- Implementing core features including ticket creation, status tracking, and role based access control
- Developing API endpoints and service layer architecture to support scalable operations
- Designing database schemas and handling data persistence for ticket and user management
- Planning deployment using Docker and cloud infrastructure

Python, SQL, MongoDB, Flask, REST APIs, Docker, Graph Algorithms, React

### RightPath — Safety-Aware Campus Navigation System

- Designed and implemented a graph based routing system using modified Dijkstra and A\* algorithms
- Reduced simulated risk exposure by 40 percent while limiting route distance increase to 12 percent
- Built REST APIs to serve route computations based on risk scored data
- Structured datasets into normalized schemas to improve query performance
- Dockerized backend services for reproducible deployment environments

Python, Flask, React, REST APIs

### Log Analysis System

- Built a full stack system to process and analyze structured log data using Flask and React, enabling detection of suspicious activity
- Developed REST APIs to parse logs, extract key request fields (timestamp, IP, method, status), and return structured insights
- Implemented rule based detection to identify failed requests, admin access patterns, and high frequency IP traffic

Python, Scikit-learn, TensorFlow/Keras, CNNs, PCA, Model Evaluation

### Pneumonia Detection from Chest X-Ray Images

- Built machine learning models (CNN, Logistic Regression, Random Forest) to classify medical images
- Evaluated model performance using ROC-AUC, precision, recall, and confusion matrices

JAVA, OBJECT-ORIENTED DESIGN, JAVA FX

### Flight Booking System — Modular Java Application

- Designed an object-oriented system with layered architecture to separate business logic and UI
- Implemented validation and exception handling to ensure reliable transactions

## 💼 Work Experience

01/2026 – present

### Security Specialist — Microsoft, Mountain View

- Manage structured access control operations to support corporate engineering teams.
- Monitor and coordinate incident response workflows.
- Interface with cross-functional stakeholders to communicate site updates and enforce procedural standards.

07/2023 – 10/2023

### Software Developer (Freelance) — VetsJoy

- Collaborated with a developer to support backend development for a live web application
- Implemented and tested REST API endpoints for basic CRUD operations and request validation
- Assisted with debugging backend issues and verifying data handling across endpoints
- Gained exposure to real-world development workflows, version control, and production requirements

## 🎓 Education

08/2023 – 12/2025  
San Jose, CA

### Bachelors | Data Science San Jose State University

08/2020 – 07/2023  
San Jose, CA

### Associate Degree | Mathematics Evergreen Valley College
